Weather

- — A fragmented band of CLST CB (Tops FL380-420) moves E / NE across W-Germany, secondary areas of ISOL / CLST CB also affecting NE-Germany and Switzerland. This CLST CB activity is likely to continue through the day, slowly shifting east towards Central Europe. ISOL CB form across the Alps from SE-France to Austria later in the morning these likely becoming CLST CB (Tops FL400-450) for the afternoon and evening period, perhaps even WSPR over Austria. These two areas in effect create a wide area of scattered active thunderstorms extending from the Alps to the Baltic Sea for the afternoon. ISOL CB form over S-France (Tops FL370-390) and over mountains in E-Spain (Tops FL400-450) into the afternoon, these likely become CLST until the evening.
