Weather

- — A strong west-southwesterly jet stream over S-Europe brings a risk of moderate to severe clear-air turbulence aloft across an area extending from the W-Mediterranean to the Black Sea via the Balkans. A broad band of heavy rainfall, low cloud and windy conditions stretching from Poland to Romania is moving eastwards. Behind this front, a broad area of open-cell convection is spreading from England, the Bay of Biscay and NW-Spain across France towards Germany and Switzerland, bringing active showers, ISOL CB (Tops FL240–280) and locally strong winds. A similar area of convection and fresh to strong winds is affecting the western Balkans, while strong winds also affect the western coast of Italy and the Gulf of Genoa. Low pressure over the Baltic Sea is bringing rain to surrounding areas, with snowfall possible over parts of Sweden and Finland. Fog and low cloud are redeveloping over England and will persist overnight into tomorrow morning. Later tonight, another area of fog patches will develop over N-Germany.

Aerodromes

- — LIMJ (Genova) Airfield N/A WIE until 22:00 due to drone activity.

Airspace

- — No significant issues.
